The unit contains 20 basic programs providing complex effect.

MODE OF ACTION

The DeVita Cosmo action is based on the results of research in the area of quantum light theory. Visible light has a wide colour spectral composition consisting of radiation with different wavelength and frequency ranges. Each colour may have particular effects on certain organs or systems through receptors in the skin. Zakharyin-Ged areas located in various parts of the body, including face and neck, are influenced under the principle of reflex response. Quantum radiation restores the balance of body systems and contributes to their functional restoration due to the reflex action at the nerve endings and to the activation of biologically active substances synthesis.
