

COMPLEX DIGESTION WITHOUT PROBLEMS

WHY IS IT IMPORTANT MAINTAIN HEALTH OF THE GASTROINTESTINAL TRACT?

The gastrointestinal tract is a complex system on which the vital activity of the whole organism depends. In this system the food is processed into substances necessary for the functioning of organs. Also, the processes of obtaining energy and building material for new cells begin in the gastrointestinal tract.

More than half of the world's population suffers from digestive disorders. Their main causes are an unbalanced diet, poor ecology, poor eating habits (overeating, diets, nutrition on the go, convenience foods, etc.). One in four people has a history of a disease of the gastrointestinal tract.

This leads to serious consequences - from problems with body weight to diseases that require surgery. In addition, problems with the gastrointestinal tract also affect overall well-being, performance and appearance. Improper metabolism causes skin problems - acne, dryness or greasiness, dull complexion, wrinkles.

Common digestive problems are pain after eating and on an empty stomach, heartburn, stool disorders, nausea and flatulence. A person is forced to follow a special diet. Discomfort associated with the stomach and intestines affect the lifestyle, making it less active, and puts a limit on travelling.

MECHANISM OF ACTION

DeVita AP – the action is based on the phenomenon of resonance, in particular, the studies of the scientist and physician Royal Raymond Rife. Rife discovered that each microorganism has an individual vibration frequency, an increase in the amplitude of which leads to the death of the microorganism without harming other cells.

Parasites disrupt the secretory and motor functions of the stomach, pancreas, liver and intestines. Parasites can block the ducts of the liver and pancreas with their bodies, causing their inflammation. Helminths are also conductors for other microbes. DeVita AP basic antiparasitic programs affect most known pathogens, quickly, effectively and without side effects, removing the parasitic load from the organism.

The special program “No schistosomes (blood-flukes) & trematods” relieves from the parasitic burden of the liver and blood, restoring their functions and reducing intoxication.

Special programs “Healthy Gastrointestinal”, “Help against poisoning”, “Drainage Antitox” improve the condition of intoxication or intestinal flu, neutralize and remove toxins.

“Drainage -General” program is used to cleanse the body after applying basic antiparasitic programs, reduces parasitic intoxication and improves overall well-being.

DeVita Ritm – In this device, the development of scientists R. Voll and A. F. Kramer is embodied, which found that each organ has a healthy frequency of oscillations. DeVita Ritm gently affects the body, by giving it the frequency of vibrations of healthy organs. As a result, the body works on self-healing.

«Healthy day» and «Health» automatic programs normalize the work of the stomach and intestines, which is especially important for people with a violation of the diet, helps to increase the body's defenses and harmonize the work of all systems.

Special programs “Digestion normalization” and “Healthy pancreas” are aimed at improving the functioning of the pancreas, normalizing the functions of the intestines, which is important not only to restore overall digestion, but also to improve absorption, reduce severity and bloating, restore immunity, metabolism normalization.

DeVita Energy restores physiological processes in the digestive system, starts the mechanism of self-regulation.

PREVENTIVE MEASURES FOR DISEASES OF THE GASTROINTESTINAL TRACT

Drink fluids 15-30 minutes before or 2-4 hours after eating, but not with meals. Fluids dilute the gastric acid and interfere with digestion.

Eat fruits separately from other foods: either 30 minutes before or 3-4 hours after eating.

Obtain moderation in eating. Get up from the table with a feeling of slight hunger. The signal of the stomach about saturation does not immediately go to the brain. By eating up to satiety, you risk overeating.

Eat freshly cooked foods. It is advisable to cook food immediately before eating it.

Eat small portions 4-5 times a day. You should not experience severe hunger in between meals, but you should not eat if you don't feel hungry.

When eating, do not get distracted by reading, TV, long conversations. Also, do not eat in a bad mood. All this interferes with the proper digestion of food.

Eat slowly, chew for a long time and carefully so that the food is saturated with saliva as much as possible.

In the evening, it is advisable not to eat 2 hours before bedtime. A feeling of hunger can be quenched with something light - for example, low-fat cottage cheese or kefir.
