

COMPLEX LYME DISEASE

WHAT DANGERS DO TICK BITES CARRY?

Ticks are one of the most diverse and ancient groups of arthropods on Earth. As a rule, mites are free-living, but parasitic blood-sucking species are also found. Among them, the most famous are the ixodid ticks (Ixodoidea). They carry the causative agents of human diseases: tick-borne encephalitis, tick-borne borreliosis (Lyme disease), etc.

Ticks are active in the period: late March, early April, increasing numbers by mid-May. The maximum number is preserved until the end of June, and sometimes until September. Ticks prefer moderately shaded and moistened deciduous and mixed forests. Ticks lie in wait for their prey, sitting on the ends of blades of grass, sticks and twigs sticking up.

Tick saliva is able to dissolve the walls of blood vessels and reduce immunity. Infectious agents are also transmitted through saliva, which pose a danger to human health. Agent transfer occurs in the first minutes after being bitten. Tick-borne encephalitis is the most dangerous of tick-borne infections. Tick-borne borreliosis is the most common.

Infectious agents caught by a tick bite infect the nervous system, musculoskeletal system, and the cardiovascular system. They lead to intoxication and further damage to the liver and kidneys, a general decrease in immunity and a state of constant fatigue.

DeVita AP – the action is based on the phenomenon of resonance, in particular, the studies of the scientist and physician Royal Raymond Rife. Rife discovered that each microorganism has an individual vibration frequency, an increase in the amplitude of which leads to the death of the microorganism without harming other cells.

Parasites that enter the body cause severe intoxication with damage to the nervous, cardiovascular systems and musculoskeletal system. The DeVita AP complex of antiparasitic programs acts on specific pathogens and associated parasites, quickly, effectively and without side effects, removing pathogenic toxic load and signs of inflammation.

“Cleansing” automatic program is used to remove toxins and reduce the toxic load on the excretory system after applying a complex of antiparasitic programs.

DeVita Ritm – In this device, the development of scientists R. Voll and A. F. Kramer is embodied, which found that each organ has a healthy frequency of oscillations. DeVita Ritm gently affects the body, by giving it the frequency of vibrations of healthy organs. As a result, the body works on self-healing.

The automatic programs “Healthy Day” and “Health” have a beneficial effect on the work of the whole organism, increasing its resistance to foreign agents. Strengthen defenses, increase vitality. Special programs “Nervous system- general”, “Healthy joints” and “Healthy heart” help reduce the load on these organs and restore their energy potential. “Complete Cleansing” automatic program helps in main excretory system restoration and harmonizes the body.

DeVita Energy harmonizes the body’s work, energizes, activates the processes of toxin elimination. Improves the general condition of intoxication resulting from infection after a bite. Reduces lethargy and drowsiness.

DIRECTIONS FOR USE

NUTRITIONAL RECOMMENDATIONS FOR USING DEVITA

Do not drink carbonated alcoholic and non-alcoholic drinks - they reduce the impact of the devices. Remove or minimize coffee in your diet. Avoid eating “junk food” (chips, crackers, etc.) - this can cause digestive problems. Drink clean drinking water, at least 1-1.5 L / day to remove toxins from the body.

USE DEVITA DEVICES IN THE FOLLOWING SITUATIONS:

- immediately after a tick bite;
- if the tick bite was earlier;
- with problems with the cardiovascular system, joints, kidneys, liver, resulting from a tick bite.

COMBINE THE DEVICES WITH DELIXIR SMART CELL NUTRITION

For best results, it is recommended to use the DeVita devices in conjunction with the DeLixir MULTI-ENERGY, DeLixir pH BALANCE and DeLixir DETOX smart cell nutrition supplements.

PREVENTIVE MEASURES FOR TICK BITES

When in tick habitats, avoid dark tones in clothing, as ticks are harder to spot on a dark background.

Pull outerwear into your pants and pants into your socks. If there is no hood, put on a hat.

Every 15 minutes, inspect your clothes, and if possible, inspect the head and body, especially above the waist, ticks are most often found there.

Use chemical protection against ticks. Treat exposed body parts, clothing, sleeping bag, tent and other items.

If you most often spend time in a summer cottage, where ticks live, then this territory should be treated with a special insecticidal agent that kills ticks.

Arriving home, remove clothing outside the living room and carefully inspect it, paying particular attention to folds, seams, pockets.

If you find a sucking tick, do not remove it yourself. Contact the regional clinic or district emergency room.

You will get the most effective results by combining the preventive measures with the use of DeVita technologies and DeLixir smart cell nutrition supplements.
